Atlantis Japan Opportunities Fund: US Dollar Units
A sub-fund of the Atlantis International Umbrella Fund

ISIN: IE0033648662

Managed by Atlantis Investment Management (Ireland) Limited.

Objectives and Investment Policy

The fund aims to generate long-term capital appreciation.

The fund invests primarily in a portfolio of equities or equity-related securities (such as convertible bonds, preference shares or warrants) issued by companies located in Japan or deriving a preponderant part of their income or assets from Japan.

The fund will at all times invest more than 50% of its net asset value directly in equity securities. Subject to this equities securities quota, the fund may also invest up to 20% of its net assets in the following instruments:- (i) investment grade debt securities; (ii) money market instruments (such as debentures, notes (including corporate and sovereign issued floating and fixed rate notes) with a minimum term of one year or more); (iii) deposits with credit institutions; (iv) American Depository Receipts; (v) UCITS or certain other open-ended collective investment schemes provided that the aggregate investment by the fund in UCITS or other open-ended collective investment schemes shall not exceed 10% of its net assets.

The fund may also invest up to 10% of its net assets in equity real estate investment trusts (REITs) which are listed on the Tokyo Stock Exchange or on the Osaka Stock Exchange.

These securities will primarily be listed or traded on stock exchanges in Japan, although the fund may to a lesser extent invest in securities listed elsewhere.

The fund is considered to be actively managed in reference to – the TOPIX USD Index (the “Benchmark”) by virtue of the fact that it uses the Benchmark for performance comparison purposes. Certain of the fund’s securities may be components of and may have similar weightings to the Benchmark. However the Benchmark is not used to define the portfolio composition of the Fund or as a performance target and the Fund may be wholly invested in securities which are not constituents of the Benchmark.

The investment manager invests in companies which it believes are undervalued and are experiencing growth that is not yet reflected in their share price.

Any income arising from the fund’s investments is reinvested.

Units can normally be bought and sold on any business day, being a day on which banks are open for business in Dublin, London and Hong Kong.

Risk and Reward Profile

Lower risk ← Higher risk
Potentially lower reward Potentially higher reward

- Historical data may not be a reliable indication for the future.
- The risk category shown is not guaranteed and may shift over time.
- The lowest category does not mean 'risk free'.

Why is the fund in this category?

Funds in this category have shown a high historical volatility. Volatility describes how much the value of the fund went up and down in the past.

The fund invests in the shares of some smaller to medium sized companies which may have a more limited market than securities issued by larger companies.

The fund mainly invests in one country. It is therefore vulnerable to the market sentiment of that country. This type of fund can carry a higher risk when compared to a fund with a broader investment universe.

This unit class’s net asset value is calculated in US dollars while the fund’s investments are primarily denominated in Japanese yen. The fund’s performance may therefore be adversely affected by exchange rate movements.

For further information please see the ‘Risk Factors’ section of the supplement to the prospectus for the fund.
